

Treasury Register

Base version walkthrough

Thirty steps front to back, one screenshot each, every scenario the base app supports · book dated 3 September 2026

This is the full walkthrough of the Treasury Register at its foundational layer — the app before any AI feature is added on top. Read the theory first to understand what each control is guarding, then drive the app step by step. Every step has a screenshot, the action to take, what you should see, and a short paragraph on why the step matters.

The walkthrough covers the full flow: proposing and approving a deal, both failure paths (group limit and tenor band) with the resize and cancel resolutions, switching enforcement to warn-with-override, onboarding a new counterparty, both views of the exposure panel, currency obligations with linking and unlinking of forwards, a rating action in both directions, and the whole deal lifecycle through confirmation, amendment and settlement to closed.

Part 1 · The theory

Corporate treasury places cash. It keeps a portion in the operating account for near-term outflows, and puts the rest to work — deposits with banks, money-market funds, gilts, forwards to hedge foreign currency obligations. The choice of where to place money is a credit-risk decision, an operational-risk decision, and an accounting decision. A treasury register is where those decisions are recorded, controlled, and re-tested when the world moves.

What the register is built to control

- **Credit risk.** If the counterparty fails, some or all of the money placed with them is lost. The register enforces limits per counterparty and per credit group.
- **Tenor risk.** Lending for longer is riskier than lending for less, at a given rating. The register enforces a maximum tenor for each rating band.
- **Concentration risk.** Even inside every counterparty limit, putting too much of the portfolio with one group is a different kind of failure. The register enforces a concentration cap as a percentage of the whole book.
- **Operational risk.** A wrong number keyed, a confirmation not received, a rate that disagrees with what was actually traded. The register enforces segregation of duties, three-way matching, and re-tests every position on any material change.

The one rule that ties it together

Every path that puts a position on the book passes through the same six checks and writes a check run. Keying a deal from the ticket, correcting one against a confirmation, amending one — all three go through the same gate. There is no side door. That is what makes an auditor's question six months later answerable: the arithmetic each check ran is stored with the deal, so what was tested against what is a matter of record.

The six checks, and what each one guards

Check	What it enforces
COUNTERPARTY_ACTIVE	The counterparty is on the approved list and its status is active. A suspended name cannot receive
INSTRUMENT_PERMITTED	The instrument (deposit, forward, MMF, gilt) is one this counterparty is approved for. Not every
ENTITY_LIMIT	The proposed position, plus every live position with this legal entity, sits under the per-entity lim
GROUP_LIMIT	The proposed position, plus every live position with any entity in the same credit group, sits un
TENOR_BAND	The tenor is within the maximum the counterparty's rating allows. Lending £1m to a BBB+ nam
CONCENTRATION	The credit group's share of the portfolio stays under the concentration cap. The concentration f

Segregation of duties

The person who proposes a deal cannot be the only person who approves it. Every deal records who proposed it, and the approve endpoint refuses if the same user presses it. Above a threshold, only a specific role can sign — an analyst up to £1,000,000, Head of Treasury up to £10,000,000, CFO above that. The ticket names the required approver before the deal is even submitted.

The one queue, two causes

A blocked deal is not discarded — it becomes a piece of work with a reason code. And it lands in the same queue that carries a confirmation mismatch, told apart by cause. A limit failure happens before the deal exists and is resolved by changing the deal. A mismatch happens after and is resolved by agreeing what was actually traded. Each cause offers only its own resolutions.

Confirmations, amendments, settlement

A confirmation is a first-class table, not a column on the deal. Fold it in and there is nothing left to compare against. The matcher compares field by field and names what disagreed, so the queue item reads "the rate was keyed at 4.20 per cent and confirmed at 4.18", not "something differs".

An amendment is an entry, not an edit. When a correction is applied, the original accrual rows survive and reversing rows are written against them. Every amendment is re-tested against the six checks before anything is reversed, so an amendment cannot be a way round the gate.

Settlement is a three-way match. The deal record, the counterparty confirmation, and the bank statement all have to agree. Two of three is not enough. Closing a deal returns headroom to the counterparty; until it closes, the counterparty still holds the room and the next deal may be blocked for no reason at all.

The two exposures

The word **exposure** is used twice for two figures that must never be added together. Counterparty exposure is how much of the book is placed with each bank — measured in pence, for credit risk. Currency exposure is what the business owes in each currency — measured in that currency's minor units, for FX risk. A forward increases the first and reduces the second; the two move in opposite directions and are kept in separate tabs, in separate tables.

Part 2 · Getting oriented

Step 01 · Sign in

The screenshot shows a web interface for 'Treasury Register'. At the top, there is a red icon of a document with a checkmark. Below it, the title 'Treasury Register' is displayed, followed by the subtitle 'Every action is recorded against the person who took it.' The main form contains two input fields: 'Email address' and 'Password'. Below these fields is a red button labeled 'Sign in'. At the bottom of the form, there is a section titled 'PROTOTYPE ACCOUNTS, PASSWORD TREASURY' which lists three accounts: 'A. Whitfield' (Analyst, Proposes deals), 'M. Doran' (Head of Treasury, Signs up to the second threshold), and 'R. Sethi' (CFO, Signs above it). A note at the bottom of this section states: 'A deal cannot be signed by the person who proposed it, so seeing that control needs two of these.'

Figure 1. Sign in.

What to do

Open <http://localhost:3000>. On the sign-in screen, use **m.doran@northgate.example** with password **treasury**. Three accounts are shown: an analyst, a Head of Treasury, and a CFO. Signing in as the Head of Treasury lets one person drive the whole walkthrough.

What you should see

The dashboard opens.

Why this matters

Every write in the register is recorded against the person who made it — segregation of duties, override reasons, breach acknowledgements, all of them need a real identity. The sign-in screen is where that identity is established.

Step 02 · The dashboard

Figure 2. The dashboard.

What to do

You are on the main screen. Read it left to right: the book, the deal ticket and the six checks beside it, the deal blotter below, and the strip along the bottom.

What you should see

The header shows **Prototype**, the tenant, today's date, the enforcement policy in force, and **Reset**. The strip shows **Exposure**, **Queue 0**, **Breaches 0**, **Ratings & Policy**.

Why this matters

Everything else in the app opens on top of this view. The five-item strip is a deliberate budget — no matter what the register does, there is always one surface, one click deep to whatever the reader needs.

Step 03 · Read the book

The screenshot displays the Treasury Register interface. At the top, there's a header with 'FUSION PRACTICES', 'Treasury Register', 'Prototype', 'Northgate Group Treasury', 'Today 3 Sept 2026', 'Enforcement: hard block', 'Reset', 'M. Doran', 'Sign out', and a user icon.

Exposure Queue Breaches Ratings & Policy

Figure 3. Read the book.

What to do

Look at **Approved Counterparties**. Each row is a counterparty: name, credit group, rating, limit and maximum tenor, used, headroom.

What you should see

Five counterparties: Caledonia Trust Bank (AA-), Harbour and Vale Bank (BBB+), Meridian Bank plc (A+), Northern Bank plc (A-), Northern Treasury Services Ltd (A-). Northern Bank and NTS are two legal entities in the same credit group.

Why this matters

Every figure in the Used and Headroom columns is computed from the live deals — nothing is typed. That is why a booking, an amendment or a downgrade updates the book immediately: the book is a view, not a duplicate.

Step 04 · The blotter

The screenshot displays the Treasury Register interface. At the top, there's a header with 'FUSION PRACTICES', 'Treasury Register', 'Prototype', 'Northgate Group Treasury', 'Today 3 Sept 2026', 'Enforcement: hard block', 'Reset', 'M. Doran', 'Sign out', and a user icon.

Exposure Queue Breaches Ratings & Policy

Figure 4. The blotter.

What to do

Scroll down to the **Deal Blotter**. Each row is a live position.

What you should see

Four live deals: Meridian £4m deposit, Harbour £3m FX forward, NTS £18m deposit, Caledonia £20m deposit. Each row shows principal, measured value (principal plus accrued interest), stage in its lifecycle, and a flag column for breaches or mismatches.

Why this matters

The blotter is the working list — clicking any row opens the deal panel and every stage of that deal in one place. The measured figure updates every night as interest accrues.

Part 3 · Proposing a deal, the happy path

Step 05 · Propose a deal that passes

4.20% as basis points

Record deal

The Six Checks

Real-time compliance gate testing deals against policy

- Counterparty approved and active** (PASS)
Meridian Bank plc is active, rated A+.
- Instrument permitted** (PASS)
A deposit is approved for this name.
- Entity limit** (PASS)
Meridian Bank plc would reach £4,509,205 against a limit of £20,000,000.
• Already held £4,009,205.
• This deal measures £500,000, principal, nothing accrued yet.
- Group limit** (PASS)
Meridian Group would reach £4,509,205 against a group limit of £25,000,000.
• Same credit: Meridian Bank plc £4,009,205.
- Term inside the rating band** (PASS)
3 months, inside the 12 month maximum in force at A+.
- Concentration cap** (PASS)
Meridian Group would hold 8.82 per cent of a portfolio of £51,133,699, against a cap of 50.00 per cent.
• Portfolio includes £8,000,000 uninvested.

Exposure | Queue | Breaches | Ratings & Policy

Figure 5. Propose a deal that passes.

What to do

In **Propose a Deal**, set **Counterparty** to Meridian Bank plc, **Principal** to 500000, **Term** to 3, and **Rate** to 4.20. Watch **The Six Checks** as you type.

What you should see

Every check turns green, each stating its arithmetic — for example *"Meridian Bank plc would reach £4,509,205 against a limit of £20,000,000"*.

Why this matters

The verdict is live and shows its working. A control that says only yes or no cannot be argued with when the auditor asks six months later; a control that shows the arithmetic can.

Meridian Bank plc
The lifecycle, and the checks it passed

Awaiting a signature from an analyst.
Proposed by somebody. A deal cannot be signed by the person who proposed it, and the signer has to hold the key the amount requires. The checks run again on signing, because this is the moment it goes on the book.
Sign as an analyst

PRINCIPAL	MEASURED
£500,000	£500,000 principal, nothing accrued yet

RATE	TERM
4.20%	3 months

STAGE	MATURES
awaiting approval	3 Dec 2026

LIFECYCLE

- Deal executed [OUTSIDE] 3 Sept 2026
4.20 per cent for 3 months.
- Deal captured Keyed. 4 Sept 2026
- Six checks run Recorded against the limit and the policy version in force. 4 Sept 2026
- Awaiting approval ANALYST has to sign. —
- Payment instructed [DRACLE] Handed to Oracle Fusion Payments. —
- Awaiting confirmation [OUTSIDE] It arrives on its own route, which is the only reason matching is a control. —
- Maturity due The expected amount falls due. 3 Dec 2026
- Three way match The deal record, the confirmation and the statement. —
- Deal closed Headroom returns to the book. Until a deal closes the counterparty holds it, and the next deal may be blocked for no reason. —

THE CHECKS IT PASSED
Read back from what was written on the day, never recomputed. Limit in force then: £20,000,000 to 12 months, approved by Head of Treasury.

- Counterparty approved and active Meridian Bank plc is active, rated A+.
- Instrument permitted A deposit is approved for this name.
- Entity limit Meridian Bank plc would reach £4,509,205 against a limit of £20,000,000.
- Group limit Meridian Group would reach £4,509,205 against a group limit of £25,000,000.
- Term inside the rating band 3 months, inside the 12 month maximum in force at A+.

Figure 7. Approve it.

What to do

Click the new blotter row to open the deal panel. Click **Approve**.

What you should see

The lifecycle rail on the right updates: **Approved** is now ticked with today's date and the approver's name. The stage moves off **awaiting approval**. The six checks re-run at approval and are recorded on the check run.

Why this matters

The six checks re-run at approval, not only at capture. Time passes between keying and signing, and the book may have moved — a downgrade could have arrived, another deal could have used the headroom, and the approve endpoint tests all of that again.

Part 4 · Proposing a deal, refused paths

Step 08 · The group limit failure

The Six Checks

Real-time compliance gate testing deals against policy

- Counterparty approved and active: PASS
Northern Bank plc is active, rated A-.
- Instrument permitted: PASS
A deposit is approved for this name.
- Entity limit: PASS
Northern Bank plc would reach £10,000,000 against a limit of £15,000,000.
• Already held £0.
• This deal measures £10,000,000, principal, nothing accrued yet.
- Group limit: BREACH
Northern Group would reach £28,119,836 against a group limit of £25,000,000.
• Same credit: Northern Treasury Services Ltd £18,119,836.
[Resize to the amount that fits](#)
- Term inside the rating band: PASS
6 months, inside the 6 month maximum in force at A-.
• The A- band allows 12 months. The limit in force is held at 6.
- Concentration cap: PASS
Northern Group would hold 46.38 per cent of a portfolio of £60,633,699, against a cap of 50.00 per cent.

Exposure | Queue | Breaches | Ratings & Policy

Figure 8. The group limit failure.

What to do

Refresh the page so the ticket clears. Set **Counterparty** to Northern Bank plc, **Principal** to 10000000, **Term** to 6.

What you should see

ENTITY_LIMIT still passes (Northern Bank plc alone has room). **GROUP_LIMIT** fails: "Northern Group would reach £28,119,836 against a group limit of £25,000,000". A button appears: **Resize to the amount that fits**, offering £6,880,164.

Why this matters

This is the failure a per-entity view cannot catch. Northern Bank plc has £5,000,000 of headroom of its own — a naive check says yes. The exposure that matters is to the group behind both names, and only the group view sees it. The system also does the subtraction so a resize is a decision, not a calculation.

Step 09 · Take the resize

The screenshot displays the Treasury Register interface. The top navigation bar includes the Fusion Practices logo, 'Treasury Register', 'Prototype', 'Northgate Group Treasury', 'Today 3 Sept 2026', 'Enforcement: hard block', 'Reset', 'M. Doran', 'analyst, head of treasury', and 'Sign out'.

The main content area is divided into three sections:

- Approved Counterparties:** A table listing active credits, limits, ratings, and headroom. The table has columns: COUNTERPARTY, RATING, LIMIT, USED, and HEADROOM. It lists five counterparties: Caledonia Trust Bank, Harbour and Vale Bank, Meridian Bank plc, Northern Bank plc, and Northern Treasury Services Ltd. Each entry shows its rating, limit, used amount, and headroom percentage.
- Deal Blotter:** A table showing live positions and active deals across the book. It has columns: COUNTERPARTY, INSTRUMENT, PRINCIPAL, MEASURED, STAGE, and FLAG. It lists five deals: Meridian Bank plc (Deposit, £500,000), Meridian Bank plc (Deposit, £4,009,205), Harbour and Vale Bank (Fx Forward, £3,000,000), Northern Treasury Services Ltd (Deposit, £18,119,836), and Caledonia Trust Bank (Deposit, £20,204,658).
- Propose a Deal:** A form for proposing a new deal. It includes fields for Counterparty (Northern Bank plc), Instrument (deposit), Principal (£) (6880164), Term (months) (6), and Rate (%) (4.20). A 'Record deal' button is at the bottom.

The bottom navigation bar includes links for Exposure, Queue, Breaches, and Ratings & Policy.

Figure 9. Take the resize.

What to do

Click **Resize to the amount that fits**.

What you should see

Principal jumps to **6,880,164**. Every check turns green. The verdict passes; the deal is now bookable.

Why this matters

The button fills the ticket in but does not record anything. The resize is your decision, not the system's — you can accept it, type a different amount, or choose another counterparty.

PASS

Exposure

Queue

Breaches

Ratings & Policy

Figure 10. The tenor band failure.

What to do

Refresh again. Set **Counterparty** to Harbour and Vale Bank, **Principal** to 1000000, **Term** to 6.

What you should see

Both limit checks pass (£1,300,000 against £8,000,000). **TENOR_BAND** fails: "6 months, against a maximum of 3 in force at BBB+". No resize is offered.

Why this matters

Amount and duration are separate risks. Lending a small sum to a weaker name for six months can be worse than a large sum for one week, and a system that checks only the amount misses it. No amount of money fixes a bad term.

Step 11 · Record it anyway → the queue

The screenshot displays the 'Treasury Register' interface. The main section is titled 'Approved Counterparties' and shows a table of active credits, limits, ratings, and headroom. The table includes columns for Counterparty, Rating, Limit, Used, and Headroom. The counterparties listed are Caledonia Trust Bank, Harbour and Vale Bank, Meridian Bank plc, Northern Bank plc, and Northern Treasury Services Ltd. Below the table, there is a 'Deal Blotter' section showing live positions and active deals across the book. The blotter table includes columns for Counterparty, Instrument, Principal, Measured, Stage, and Flag. The deals listed are for Harbour and Vale Bank, Meridian Bank plc, and Northern Treasury Services Ltd. A 'Queue' modal is open on the right, showing a 'LIMIT FAILURE · TENOR BAND' for Harbour and Vale Bank, with a reason code of '6 months, against a maximum of 3 in force at BBB+'. The modal includes buttons for 'Resized', 'Rerouted', and 'Cancelled'.

Exposure Queue 1

Figure 11. Record it anyway → the queue.

What to do

Click **Record deal**, and go to the queue. Then open **Queue** on the strip.

What you should see

The strip shows **Queue 1**. One item, headed **LIMIT FAILURE · TENOR BAND**, with the arithmetic and three resolutions: **Resized**, **Rerouted**, **Cancelled**. The blotter has a new **blocked** row.

Why this matters

A blocked deal is not thrown away — it becomes a piece of work with a reason code attached. The interesting question afterwards is not how many deals were blocked but what was done about each.

Step 12 · Resolve it as Cancelled

Resolved.

Exposure

Queue

Figure 12. Resolve it as Cancelled.

What to do

Click **Cancelled** on the queue item.

What you should see

The item disappears from the queue. The blotter row for the blocked deal is gone; the strip returns to **Queue 0**. The evidence — the check run and the queue-item record — stays.

Why this matters

The resolution is auditable: the check run remains, and the queue record shows the reason the deal was declined. What went away was the piece of work; what stayed is the story.

Part 5 · Enforcement, and override

Step 13 · Switch to warn-with-override

Figure 13. Switch to warn-with-override.

What to do

Click **Ratings & Policy** on the strip. Under **Enforcement**, click **Warn with an override**.

What you should see

The Enforcement label in the header changes from **hard block** to **warn with override**. A new policy version is written; the old one is superseded (runs recorded under it stay reproducible).

Why this matters

This is the customer-settled decision made visible. Hard block and warn-with-override are both shipped, as a policy setting, so the argument can be resolved by flipping the switch on a failing deal in the room rather than in a slide.

Step 14 · Override a failing deal

Queue
One queue, two causes, told apart by a reason code

Nothing open. A blocked deal or a confirmation mismatch lands here with a reason code.

Exposure Queue

Figure 14. Override a failing deal.

What to do

Close the panel. Set **Counterparty** to Harbour and Vale Bank, **Principal** to 1000000, **Term** to 6 again. Click **Record deal**, and go to the queue. Open the queue.

What you should see

The same tenor-band failure lands. The resolutions now include **Override**, which appears only under warn-with-override. It requires a reason typed in the box above.

Why this matters

The override is a decision, not a hack — it needs a reason and it is recorded as an OVERRIDDEN outcome on the check run. The reason becomes the audit trail. Under hard block the button is not there, because there is nothing to override.

Part 6 · Onboarding a new counterparty

Step 15 · Add a counterparty

Figure 15. Add a counterparty.

What to do

In the header of **Approved Counterparties**, click **Add**. Type **Sterling Union Bank** as the name.

What you should see

The four-step onboarding starts: **create** the counterparty, **verify** it (rating, country, instruments), **set the limit** (amount, max tenor, approver), then **activate** it. Each step is separately refusable.

Why this matters

Onboarding is four steps because a name has to be created, checked against sources, sized within a rating band, and only then activated for placements. The four-step split lets a control fail at the step where the failure actually is, not with a generic "onboarding refused".

Part 7 · Exposure

Step 16 · Counterparty exposure — dial

Figure 16. Counterparty exposure — dial.

What to do

Click **Exposure** on the strip. The default view is the dial.

What you should see

Each wedge is a credit group's share of the portfolio, sized by share. Rotating the dial (arrow keys or clicking a wedge) selects a group; the centre shows its amount, share of the book and status against the concentration cap.

Why this matters

The dial is a picker for a set of groups, oriented around the concentration question. It answers *which group is closest to the cap* at a glance, without a table lookup.

Step 17 · Counterparty exposure — breakdown

Figure 17. Counterparty exposure — breakdown.

What to do

At the top of the panel, click **Breakdown**.

What you should see

Three tables: **By credit group**, **By rating band**, **By maturity bucket**. Each row shows the used, limit and utilisation.

Why this matters

The same book, cut three ways. A concentration invisible by counterparty is obvious by rating band; a refinancing cliff is only visible by maturity. Which view is right depends on the question.

Step 18 · Currency exposure

Exposure

Every counterparty's share of the book, and how close each is to its limit

Counterparty exposure | **Currency exposure**

Counterparty exposure and currency exposure are separate figures moving in opposite directions. They are never netted.
A forward increases the first and reduces the second. There is no endpoint that returns both, and no query joins them.

NET OBLIGATION BY TIME BUCKET, AGAINST THE COVER TARGET

TIME BUCKET	COVERED
0-3m	€0 covered of €0
3-6m	€0 covered of €0
6-12m	€0 covered of €0
over 12m	€0 covered of €0

OBLIGATIONS, AND WHAT COVERS EACH

Record an obligation

No obligations recorded. An exposure exists before any hedge, and often outlives several of them.

Figure 18. Currency exposure.

What to do

At the top of the panel, switch to the **Currency exposure** tab.

What you should see

A warning at the top: counterparty and currency exposure are never netted. Four time buckets, each with a coverage bar against a target. The obligations section is empty until you record one.

Why this matters

The word **exposure** is used for two figures that must never be added together. A forward increases the first and reduces the second — they move in opposite directions. Keeping them in separate tabs, with no shared key, is the control that stops them being netted.

Step 19 · Record an obligation

Figure 19. Record an obligation.

What to do

Click **Record an obligation**. Enter a payable of €4,000,000 with reference PO-2026-WALK, due about two months out.

What you should see

A row appears: **€4,000,000 PAYABLE** at status **IDENTIFIED**. The 0-3m bucket now reads “€0 covered of €4,000,000” and reports how short it is against the target cover.

Why this matters

An exposure exists before any hedge and often outlives several of them, so it is recorded in its own right. Every figure carries its currency beside it and is held in minor units — nothing on this tab is in pence.

Step 20 · Link a forward

Treasury Register

Caledonia Trust Bank 4.15% • 24 months	Deposit	£20,204,658	principal plus 204,658 accrued over 90 days	£20,204,658 matures in 641 days	

Exposure
Every counterparty's share of the book, and how close each is to its limit

Counterparty exposure | Currency exposure

Counterparty exposure and currency exposure are separate figures moving in opposite directions. They are never netted.
A forward increases the first and reduces the second. There is no endpoint that returns both, and no query joins them.

NET OBLIGATION BY TIME BUCKET, AGAINST THE COVER TARGET

Time Bucket	Net Obligation	Cover Target	Coverage
0 3m	€3,200,000 covered of €4,000,000	80.00%	80.00% covered, against a target of 80.00%
3 6m	€0 covered of €0		Nothing owed in this bucket.
6 12m	€0 covered of €0		Nothing owed in this bucket.
over 12m	€0 covered of €0		Nothing owed in this bucket.

OBLIGATIONS, AND WHAT COVERS EACH

Record an obligation

€4,000,000 PAYABLE
purchase order - due 2 Nov 2026

⇒ €3,200,000 forward with Harbour and Vale Bank

Unlink...

Link a forward

Figure 20. Link a forward.

What to do

Click **Link a forward** on the obligation row. Pick the Harbour and Vale forward, enter £3,200,000 as the amount covered, click **Link**.

What you should see

Coverage moves from 0% to 80% and the bar turns green — the target is met. The status becomes **PARTIALLY COVERED**. The hedge appears indented beneath the obligation, named by counterparty.

Why this matters

A forward is an ordinary row in the deal table; there is no separate hedge table. Without the link you own forwards and cannot say anything is covered. Linking more than the obligation is worth is refused: cover across live links cannot exceed the exposure.

Step 21 · Unlink with a reason

Figure 21. Unlink with a reason.

What to do

Click the **Unlink...** dropdown on the hedge row. Choose **Rolled**.

What you should see

Coverage returns to 0% and the status returns to **IDENTIFIED**. No error.

Why this matters

Unlinking needs a reason: rolled, closed early, exposure cancelled, reallocated. A covered exposure becoming uncovered when a delivery slips is correct behaviour, not a defect — nobody made a mistake, the world moved.

Part 8 · Rating actions

Exposure Queue

Ratings and policy

The world moving, and the two settings that are still open

RECORD A RATING ACTION

Counterparty: Caledonia Trust Bank — AA-

New rating: BBB

Caledonia Trust Bank holds £20,204,658 against £25,000,000. At BBB the limit becomes £5,000,000 to 3 months, and every live position is re-tested against it.

Apply, and re-test the book

ENFORCEMENT

Both are built as a policy setting, which takes the decision off the critical path. Settle it by flipping it on a failing deal in the room rather than in a slide. Changing it writes a new policy version, so runs recorded under the old one stay reproducible.

Hard block Warn with an override

THE CLOCK

Everything derives from it. Moving it forward accrues interest on every deposit, which moves every measured exposure with it.

03-09-2026

Figure 22. Record a rating action.

What to do

Click **Ratings & Policy** on the strip. Under **Record a rating action**, set counterparty to Caledonia Trust Bank and new rating to **BBB**.

What you should see

A summary appears in the panel: "Caledonia Trust Bank holds £20,204,658 against £25,000,000. At BBB the limit becomes £5,000,000 to 3 months, and every live position is re-tested against it."

Why this matters

A rating action is the world moving — not something inside the treasury team. The panel is where that movement is recorded and where the whole book is re-tested against it.

Step 23 · Apply, and see the breach raised

The screenshot displays the 'Treasury Register' interface. The 'Approved Counterparties' panel lists several banks with their ratings, limits, and used amounts. The 'Breaches' panel shows two breaches for Caledonia Trust Bank, one for an amount breach and one for a tenor breach, both with buttons to 'Hold to maturity', 'Break early', 'Seek ratification', and 'Reduce on roll'.

COUNTERPARTY	RATING	LIMIT	USED	HEADROOM
Caledonia Trust Bank Caledonia Group • group at £20,204,658 of £30,000,000	BBB watch	£5,000,000 to 3 months	£20,204,658	£-15,204,658 free
Harbour and Vale Bank Harbour and Vale Group • group at £300,000 of £8,000,000	BBB+	£8,000,000 to 3 months	£300,000	£7,700,000 free
Meridian Bank plc Meridian Group • group at £4,009,205 of £25,000,000	A+	£20,000,000 to 12 months	£4,009,205	£15,990,795 free
Northern Bank plc Northern Group • group at £18,119,836 of £25,000,000	A+	£15,000,000 to 6 months	£0	£15,000,000 free
Northern Treasury Services Ltd Northern Group • group at £18,119,836 of £25,000,000	A+	£20,000,000 to 12 months	£18,119,836	£1,880,164 free

COUNTERPARTY	INSTRUMENT	PRINCIPAL	MEASURED	STAGE	FLAG
Meridian Bank plc 4.20% • 3 months	Deposit	£500,000	£500,000 principal, nothing accrued yet	awaiting approval	—
Meridian Bank plc 4.20% • 3 months	Deposit	£4,009,205	£4,009,205 principal plus 9,205 accrued over 20 days	awaiting confirmation	—
Harbour and Vale Bank 1.740 • 3 months	Fix Forward	£3,000,000 notional EUR	£300,000 10 per cent add on to notional	awaiting confirmation	—
Northern Treasury Services Ltd 4.05% • 12 months	Deposit	£18,000,000	£18,119,836 principal plus 119,836 accrued over 80 days	matures in 305 days	—
Caledonia Trust Bank 4.15% • 24 months	Deposit	£20,000,000	£20,204,658 principal plus 204,658 accrued over 80 days	matures in 641 days	breach

Figure 23. Apply, and see the breach raised.

What to do

Click **Apply**, and re-test the book. Then open **Breaches** on the strip.

What you should see

The strip shows **Breaches 1**. The panel names the position, the counterparty, the old and new limits, and the amount that is now outside them.

Why this matters

Nothing about the deal changed — the world changed. A system that checks only at booking is blind from that moment onwards, which is exactly when credit risk arrives. The breach is **raised**, not unwound: the position is real and a person has to decide what to do about it.

Step 24 · Upgrade does not widen a limit

Breaches
Ratings & Policy

Figure 24. Upgrade does not widen a limit.

What to do

Reopen **Ratings & Policy**. Record another action for Caledonia, this time to **AAA**. Apply.

What you should see

The breach clears (the position is inside the AAA band ceiling). The limit in the book does **not** jump to the AAA maximum. It returns to what a person approved — £25,000,000.

Why this matters

If an upgrade automatically widened a limit, a rating agency would hold the pen on your credit appetite. Tightening on a downgrade is prudence and can be automatic. Widening is a decision, and a person has to make it.

Part 9 · The deal lifecycle

Step 25 · Reset and open a deal

Figure 25. Reset and open a deal.

What to do

Click **Reset** in the header. Click any row in the blotter to open the deal panel.

What you should see

The panel opens with the deal's header (principal, measured value, rate, term, stage, maturity). Below it, the **Lifecycle** rail: every step from execution to close, dated. Steps outside the system are tagged **OUTSIDE**; steps handled by Oracle are tagged **ORACLE**.

Why this matters

The deal panel is the whole story of one position in one view. The rail draws the boundary of the system on the screen rather than hiding it — a reader can see which facts the register owns and which it is repeating.

Step 26 · A confirmation that agrees

- Deal executed OUTSIDE 14 Aug 2026
4.20 per cent for 3 months.
- Deal captured Kept. 14 Aug 2026
- Six checks run No check run recorded. 14 Aug 2026
- Approved Signed by M. Doran. 14 Aug 2026
- Payment instructed ORACLE Handed to Oracle Fusion Payments. —
- Confirmation received OUTSIDE MT320 MER-WALK-1. Matched, and every field agreed. 4 Sept 2026
- Maturity due The expected amount falls due. 14 Nov 2026
- Three way match The deal record, the confirmation and the statement. —
- Deal closed Headroom returns to the book. Until a deal closes the counterparty still holds the headroom, and the next deal may be blocked for no reason. —

THE CHECKS IT PASSED

This position predates the gate. Seeded deals carry no check run, which is why the seed is illustrative rather than evidence.

THE COUNTERPARTY'S RECORD
It arrives on its own route, which is the only reason matching is a control. Fold it into the deal feed and there is nothing to match against.

MT320 MER-WALK-1
Every field agreed. MATCHED

AMENDMENTS
Nothing amended. A correction is an entry rather than an edit: the original accrual rows stay and reversals are written against them. [Raise one](#)

SETTLEMENT
The deal record, the counterparty's confirmation and the bank statement. Two of three agreeing is not enough: if the record and the confirmation agree but the statement differs, the money did not arrive as promised. [Match three sources](#)

Not settled. Until this deal closes the counterparty still holds the headroom, and the next deal may be blocked for no reason.

WHAT IF THIS DEAL IS NOT ROLLED AT MATURITY?
Matures 14 Nov 2026. Run the arithmetic as if the cash lands in the operating account instead of being rolled. Nothing is written.

☐ The whole of the deal lifecycle, in one view. Execution and confirmation are labelled outside, payment and journals

Figure 26. A confirmation that agrees.

What to do

A matching confirmation for the Meridian deposit is ingested via the confirmation feed (behind the scenes). Reload and open the Meridian row.

What you should see

The confirmation section reads **MATCHED** with "Every field agreed." and the message reference (MT320 MER-WALK-1).

Why this matters

A confirmation is a table of its own, not a column on the deal. Fold it into the deal record and there is nothing left to compare against — the control quietly disappears while still looking present.

Step 27 · A confirmation that disagrees

The screenshot displays the Treasury Register interface. The top section, 'Approved Counterparties', lists several banks with their ratings, limits, and used amounts. The bottom section, 'Deal Blotter', shows live positions and active deals. A 'Queue' pop-up is visible on the right, indicating a 'CONFIRMATION MISMATCH · RATE BP' for Harbour and Vale Bank. The queue message states: 'The rate was keyed at 1.1740 and confirmed at 1.1700.' Below the message is a table with columns: FIELD, KEYED, and CONFIRMED. The table shows a rate of 1.1740 keyed and 1.1700 confirmed. At the bottom of the queue are three buttons: 'Correct the deal', 'Challenge the bank', and 'Cancelled'.

COUNTERPARTY	RATING	LIMIT	USED	HEADROOM
Caledonia Trust Bank	AA-	£25,000,000 to 24 months	£20,204,658	£4,795,342 free
Harbour and Vale Bank	BBB+	£8,000,000 to 3 months	£300,000	£7,700,000 free
Meridian Bank plc	A+	£25,000,000 to 12 months	£4,009,205	£15,990,795 free
Northern Bank plc	A-	£15,000,000 to 6 months	£0	£15,000,000 free
Northern Treasury Services Ltd	A-	£20,000,000 to 12 months	£18,119,836	£1,880,164 free

COUNTERPARTY	INSTRUMENT	PRINCIPAL	MEASURED	STAGE	FLAG
Meridian Bank plc	Deposit	£4,000,000	£4,009,205 principal plus 9,205 accrued over 20 days	matures in 72 days	---
Harbour and Vale Bank	Fx Forward	£3,000,000 notional EUR	£300,000 10 per cent add-on to notional	confirmation mismatch	mismatch
Northern Treasury Services Ltd	Deposit	£18,000,000	£18,119,836 principal plus 119,836 accrued over 60 days	matures in 305 days	---
Caledonia Trust Bank	Deposit	£20,000,000	£20,204,658 principal plus 204,658 accrued over 60 days	matures in 641 days	---

Figure 27. A confirmation that disagrees.

What to do

A mismatching confirmation for the Harbour forward is ingested (rate 1.1700 against 1.1740). Open **Queue** on the strip.

What you should see

The strip shows **Queue 1**. The item is headed **CONFIRMATION MISMATCH · RATE BP** with the sentence *"The rate was keyed at 1.1740 and confirmed at 1.1700"* and a table of the differences. Three mismatch resolutions: **Correct the deal**, **Challenge the bank**, **Cancelled**.

Why this matters

This lands in the same queue as the limit failure from Step 11, with a different cause. A limit failure is fixed by changing the deal; a mismatch is fixed by agreeing what was actually traded. Each cause offers only its own resolutions.

Step 28 · Amend a deal — the preview

- Three way match**
The deal record, the confirmation and the statement. —
- Deal closed**
Headroom returns to the book. Until a deal closes the counterparty holds it, and the next deal may be blocked for no reason. —

THE CHECKS IT PASSED

This position predates the gate. Seeded deals carry no check run, which is why the seed is illustrative rather than evidence.

THE COUNTERPARTY'S RECORD
It arrives on its own route, which is the only reason matching is a control. Fold it into the deal feed and there is nothing to match against.

Every field agreed. MATCHED

AMENDMENTS

Raising records what is proposed and what it would change. Nothing is reversed until you apply it.

Type: Correction Effective from: 15-08-2026

Undoes a keying error. Any term may move in any direction.

New principal (£), if it changed: 18000000

New rate (%), if it changed: 4.02

New maturity date, if it changed: dd-mm-yyyy

Reason: Rate corrected against the confirmation.

20 day(s) would be reversed, £39,945 in total.
Periods touched: 2026-08, 2026-09. The amended terms are re-tested against the six checks before anything is reversed, because an amendment is a new decision about a position rather than a data fix.

Apply. Re-test, reverse and repost.

SETTLEMENT

Match three sources

The deal record, the counterparty's confirmation and the bank statement. Two of three agreeing is not enough: if the record and the confirmation agree but the statement differs, the money did not arrive as promised.

Not settled. Until this deal closes the counterparty still holds the headroom, and the next deal may be blocked for no reason.

Figure 28. Amend a deal — the preview.

What to do

Open the Northern Treasury Services deposit from the blotter. Find the **AMENDMENTS** section and click **Raise one**. Choose type **Correction**, effective date 2026-08-15, new rate 4.02, write a reason. Click **Raise, and show what it would change**.

What you should see

A preview appears: how many days would be reversed, for how much, and which accounting periods are touched. Nothing has changed yet — raising records what is proposed.

Why this matters

Recalculating the interest is the easy half of an amendment. Knowing what was already recognised is the hard half, and it is only possible because accrual is stored per day rather than computed on read. The preview lets a treasurer see the consequences before agreeing to them.

Step 29 · Apply the amendment

AMENDMENTS
Raise one

correction, applied
Rate corrected against the confirmation. New rate 4.02%. from 15 Aug 2026

SETTLEMENT
Match three sources

The deal record, the counterparty's confirmation and the bank statement. Two of three agreeing is not enough: if the record and the confirmation agree but the statement differs, the money did not arrive as promised.
Not settled. Until this deal closes the counterparty still holds the headroom, and the next deal may be blocked for no reason.

WHAT IF THIS DEAL IS NOT ROLLED AT MATURITY?
Matures 5 Jul 2027. Runs the arithmetic as if the cash lands in the operating account instead of being rolled. Nothing is written.

RECOGNISED, PER DAY
Stored rather than recomputed, because what was recognised on a day is a fact and a later recalculation would quietly rewrite it.

Figure 29. Apply the amendment.

What to do

Click **Apply**. Re-test, reverse and repost.

What you should see

The deal takes the new rate. **Recognised, per day** now reads something like *"63 days, 3 reversed"* — the original rows are still there. The amendment is listed as **correction, applied** with its date and reason.

Why this matters

The original accrual rows survive and reversals are written against them. That is the difference between an entry and an edit, and it is why the ledger can still be explained afterwards. The apply also re-tests the six checks first — an amendment cannot be a way round the gate.

Step 30 · Settlement — three-way match, deal closed

MT320 NTS-2026-88213
Every field agreed. MATCHED

AMENDMENTS

correction, applied from 15 Aug 2026
Rate corrected against the confirmation. New rate 4.02%.

SETTLEMENT
The deal record, the counterparty's confirmation and the bank statement. Two of three agreeing is not enough: if the record and the confirmation agree but the statement differs, the money did not arrive as promised.

All three agree
closed 4 Sept 2026

Record	Confirmation	Statement
£18,119,540	£18,119,540	£18,119,540

No statement lines have been ingested. The statement is the third source and it comes from Oracle, prior day.

Record a matching line and settle

The second control stands in for the statement feed, which is not built. It records a line for exactly what the deal expects, on the same basis settlement uses, so the three way match is a real comparison rather than a simulated one.

RECOGNISED, PER DAY
Stored rather than recomputed, because what was recognised on a day is a fact and a later recalculation would quietly rewrite

Figure 30. Settlement — three-way match, deal closed.

What to do

In the same panel, close the amendment form. Scroll to **SETTLEMENT** and click **Match three sources**, then **Record a matching line and settle**.

What you should see

Three figures listed: **Record**, **Confirmation**, **Statement**. All three agree. The deal **Stage** becomes **closed**. In the book, the counterparty's headroom returns.

Why this matters

If the deal record and the confirmation agree but the statement differs, the money did not arrive as promised — and that is exactly the failure a two-way match cannot see. Closing a deal returns headroom to the counterparty; until it closes, the counterparty still holds the room and the next deal may be blocked for no reason at all. Closing is part of the control system, not an accounting formality.

One line worth remembering

Every path that puts a position on the book — keying it from the ticket, correcting it against a confirmation, amending it — goes through the same six checks and writes a check run. Steps 6, 27 (resolve as Correct the deal) and 29 (Apply) are three faces of the same gate. There is no side door.
